Introduction

This release contains priority fixes driven by critical on-demand requests in Kofax ReadSoft Invoices 6.2.0.11.

Note: To install Kofax ReadSoft Invoices 6.2.0.11, an existing full installation of Kofax ReadSoft Invoices 6.2.0 is required.

If you need to perform a full product installation, see the *Kofax ReadSoft Invoices Installation Guide* for instructions.

Features added in this fix pack

274277: Support for multiple alias buyer names

ReadSoft Invoices supports multiple alias buyer names. You can update the alias buyer information using a text file.

271119: The OK button is disabled when required fields are blank

The OK button in the Verify module is disabled when the required fields of an invoice are not populated. As a result, the invoice is not approved, and an error message is displayed in the status column of the Manager module.

A new flag, VerifyXMLBuyerValidation, is added to the [Options] section in eiglobal.ini.

Flag values:

- 0 (default) = The OK button is enabled.
- 1 = The OK button is disabled.

264699: Supplier details for XML invoices

The Verify module now displays supplier details such as name, tax number, street, postal code, city, and other relevant information for the XML invoices.

262147: Transfer of original files at the job level

To transfer the original files at the job level instead of the application level, the "Transfer the invoice(s) output file" option is added in Job description > Transfer > References in the Manager module.

SQL Server 2022 support

ReadSoft Invoices supports SQL Server 2022.

Issues resolved in this fix pack

ID	Issue	Solution
274760	The Interpret module failed to capture the data during the OCR process when invoices were handled using the Thailand profile.	OmniPage is upgraded to version 22.2.0.3.
273278	The Verify module did not respond when the Arrow button was used to navigate through the fields.	The field grid navigation functionality is corrected.
270802	Unreadable text appeared in the output image of a particular PDF after processing.	OmniPage is upgraded to version 22.2.0.3.
271951	Vertical text near a line item impacted the capture of the line-item value.	A new checkbox, "Ignore vertical text while creating the line(s)", is added at

ID	Issue	Solution
		the Interpret level.
269971	ReadSoft Invoices stopped responding when invoices were rerouted for a particular invoice profile.	The memory is freed up to solve the unresponsiveness.
261308	The "All time total" counter was not updated for a particular invoice definition.	The counter is increased when the invoice is auto-approved.
166107	For some PDFs, the Interpret module read the OCR SDK "1" (italic font) as "7" at the line-item level.	OmniPage is upgraded to version 22.2.0.3.

Applies to

This fix pack is cumulative and includes the resolved issues released in previous Kofax ReadSoft Invoices 6.2.0 fix packs.

Apply this fix pack to update any of the following versions:

- Kofax ReadSoft Invoices 6.2.0 Fix Pack 1 through Fix Pack 10
- Kofax ReadSoft Invoices 6.2.0

Files included

This fix pack includes the following files:

File name	Version
KofaxReadSoftInvoices-6.2.0.11.0.24501.msp	6.2.24501.136
OmniPage Ultimate 22.2.0.3.msi	N/A
ReadMe-KofaxReadSoftInvoices-6.2.0.11.htm	N/A

Install this fix pack

Note: Before installing ReadSoft Invoices 6.2.0.11, uninstall any previous OmniPage version and install OmniPage Ultimate 22.2.0.3 included in this fix pack.

Use the following procedure to install this fix pack.

1. Verify that the following applications/services are not running.

- Kofax ReadSoft Invoices 6.2.0
- Kofax ReadSoft Invoices Service
- Antivirus software

Note: For best results, install the fix pack during off-peak processing hours.

2. Extract the contents of **KofaxReadSoftInvoices-6.2.0.11.zip** on the computer where Kofax ReadSoft Invoices is installed.
3. To install this fix pack, double-click **KofaxReadSoftInvoices-6.2.0.11.0.24501.msp**. The fix pack installer screen appears.
 - a. Click **Next** to proceed with the installation.
 - b. Follow the instructions on subsequent installer screens.
4. When prompted that the installation is finished, click **Finish**.
5. Restart any applications/services stopped before installing this fix pack.

Remove this fix pack

Use the following procedure to remove this fix pack.

1. Verify that the following applications/services are not running.
 - Kofax ReadSoft Invoices 6.2.0
 - Kofax ReadSoft Invoices Service
 - Antivirus software

Note: For best results, remove the fix pack during off-peak processing hours.

2. In Control Panel, select **Programs and Features > View installed updates**.
3. On the list of updates, in the **Name** column, select the item that corresponds to **Kofax ReadSoft Invoices 6.2.0.11**.
4. Right-click and select **Uninstall**.
5. Restart any applications/services stopped before removing this fix pack.
