About the Release

This release builds upon FlexiCapture 12 Release 4 Update 4 and includes all features and fixes from that release and its previous patches.

In this release, we have addressed security vulnerabilities issues in the following components,

- Desktop application
- Web application
- Web Services application

The Bug Fixes section lists the issues that have been fixed in this release.

For any questions or assistance, contact [Customer Support](#).

Improvements

This release addresses the following security vulnerabilities.

Desktop Application

- The error message to an error condition only displays a generic error message that does not include any sensitive information.
- Dumping process memory also ensures passwords are removed from memory.

Web Application

- JavaScript source map files are not retrievable in production environments.

Web Services Application

- The error message displayed to an error condition in the SOAP API does not display any sensitive information.
- Broken access control flaws in the FlexiCapture API have been resolved.
- Content Security Policy (CSP) only allows trusted sources of JavaScript and disables inline JavaScript.

Bug Fixes

Zendesk ID	Description
623180	When you open your project locally from the server, extracted results are the same.
628594	Order number is detected correctly in FlexiCapture cloud.
621109	OAuth refresh token for Microsoft IMAP import profiles is working correctly.
637155 636904 636895 637297	Logging in to the Project Setup Station and the Verification Station works as expected.
637263	Verification operators are able to postpone tasks in the Verification Station, as expected.

Notes

This update of FlexiCapture has resolved security vulnerabilities and functional issues. For these fixes to work as expected, ensure the following:

- Users must be assigned an appropriate role and have project access to log in to either the Verification Station or the Project Setup Station.
- If users encounter access issues with these stations, confirm their role assignment and project access permissions via the FlexiCapture Admin Console. This step typically resolves most access related concerns.
- You must re-sign once into the import profile to ensure seamless token refresh, and the fix works as expected.
